

Lesson 8 - Area of compound shapes

Mild

1) Split each shape into 2 rectangles and find the area

a) The corner cut out is 3 cm wide and 2 cm tall.

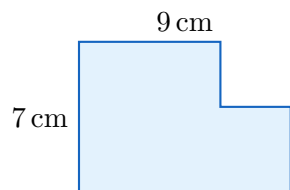

Rectangle A: $\text{ } \times \text{ } = \text{ } \text{ cm}^2$

Rectangle B: $\text{ } \times \text{ } = \text{ } \text{ cm}^2$

Total area = $\text{ } \text{ cm}^2$

b) The corner cut out is 3 cm wide and 3 cm tall.

Rectangle A: $\text{ } \times \text{ } = \text{ } \text{ cm}^2$

Rectangle B: $\text{ } \times \text{ } = \text{ } \text{ cm}^2$

Total area = $\text{ } \text{ cm}^2$

Lesson 8 - Area of compound shapes

Spicy

1) Find the area of each compound shape

a) A $9 \text{ cm} \times 7 \text{ cm}$ rectangle with a $4 \text{ cm} \times 3 \text{ cm}$ notch cut from the top-right.

b) A $12 \text{ cm} \times 8 \text{ cm}$ rectangle with a $5 \text{ cm} \times 4 \text{ cm}$ notch cut from the top-right.

c) A T-shape: top piece 10 cm wide and 3 cm tall, stem 4 cm wide and 6 cm tall.

2) Word problems

a) An L-shaped garden is $10 \text{ m} \times 8 \text{ m}$ with a $3 \text{ m} \times 4 \text{ m}$ corner removed for a shed. What is the garden's area?

b) Tiles cost 15 dirhams per m^2 . How much does it cost to tile the garden above?

Lesson 8 - Area of compound shapes

Hot

1) Find the missing length, then the area

a) An L-shape has total width 14 cm and total height 11 cm . The notch is 6 cm wide; its height is unknown. The total area is 112 cm^2 . Find the notch height.

b) A shape is made of three rectangles: 8×4 , 5×3 , and one unknown. The total area is 67 cm^2 . Find the dimensions of the third rectangle.

Investigate

Design **three different** L-shapes that each have an area of exactly 40 cm^2 .

All side lengths must be whole numbers. Sketch each shape below with its sides labelled.
