

Answer key | Lesson 12 - compound area by subtraction

Mild

1) Take away the missing piece

a) $80 - 12 = 68 \text{ cm}^2$

b) $54 - 4 = 50 \text{ cm}^2$

Spicy

1) Find the area by subtracting

a) $120 - 48 = 72 \text{ cm}^2$

b) $54 - 18 = 36 \text{ cm}^2$ (the steps cut away are 3×4 and 3×2)

2) Costing

a) $36 \times 15 = 540 \text{ dirhams}$

Hot

1) Find the missing length

a) $196 - 161 = 35$, $35 \div 5 = 7 \text{ cm}$

2) Two methods must agree

b) Add: $48 + 16 + 16 = 80$

Subtract: $144 - 64 = 80$

Both give 80 cm^2

Investigate

Many answers. *Easier to add:* an L-shape made of two rectangles. *Easier to subtract:* a picture frame or a big rectangle with one small corner missing.
