

Mild

1) Round UP, round DOWN, or use a DECIMAL

- a) **UP**: 5 cars ($17 \div 4 = 4 \text{ r } 1$)
- b) **DOWN**: 6 sweets each, 1 left over
- c) **UP**: 6 boxes to pack all 31 eggs (5 full boxes is DOWN, accept with a reason)
- d) **UP**: 4 shelves ($19 \div 5 = 3 \text{ r } 4$)
- e) **DECIMAL**: $50 \div 4 = 12.50$ dirhams each

2) Solve and write the answer in context

- a) **7 full bags**, 3 apples left over (8 bags to hold them all)
- b) **7 full boxes**, 1 pen left over (8 boxes to hold them all)
- c) **7 full rows**, 1 chair left over (8 rows to hold them all)

Spicy

1) Whole number or decimal?

- a) $578 \div 4 = 144.50$ dirhams each (decimal)
- b) $135 \div 8 = 16 \text{ r } 7$, so **17 minibuses** (round up)
- c) $247 \div 6 = 41 \text{ r } 1$, so **42 boxes** (round up)
- d) $964 \div 5 = 192.80$ dirhams each (decimal)
- e) $1825 \div 8 = 228.125$ g per bag (decimal)

2) Explain your choice

Example: “I rounded up for the minibuses because every pupil needs a seat, so 16 buses would leave 7 pupils behind.”

“I used a decimal for the money because dirhams can be split into fils.”

Hot

1) Solve the multi-step problems

- a) $1346 \div 48 = 28 \text{ r } 2$, so **29 buses**
- b) $2753 \div 12 = 229 \text{ r } 5$: **229 full boxes, 5 cookies left**
- c) $3485 \div 16 = 217.8125$, so **217.81 dirhams** each

Investigate

All three need **16 trips**. 15 trips carry $15 \times 32 = 480$ cars and 16 trips carry 512. Any number of cars from 481 to 512 needs 16 trips, so the answer stays the same.
