

Spot the mistake - be the marker

Mild

1) Find the mistake and write the correct answer

a) A pupil worked out 1324×22 :

		1	3	2	4
			$\times$	2	2
		2	6	4	8
		2	6	4	8
		5	2	9	6

The mistake: _____

Correct answer: _____

b) A pupil wrote: "Area = $13 \times 6 = 78$ cm."

The mistake: _____

Correct answer: _____

c) A pupil wrote: " $408 \div 2 = 24$."

The mistake: _____

Correct answer: _____

Spot the mistake - be the marker

Spicy

1) Find the mistake and put it right

a) A pupil shared 326 sweets between 4 children and wrote: " $326 \div 4 = 81.5$, so each child gets 81.5 sweets." Why does this answer not make sense?

The mistake: _____

Correct answer: _____

b) A pupil found the area of this shape and wrote: " $9 \times 7 = 63$, notch $4 \times 3 = 12$, area = $63 + 12 = 75$ cm²."

The mistake: _____

Correct answer: _____

Spot the mistake - be the marker

Hot

1) Mark these answers. Prove each one

a) A pupil wrote: " $6814 \times 26 = 136\,280$." First estimate (about 7000×26) to show it is wrong, then find the correct answer.

The mistake: _____

Correct answer: _____

b) A pupil wrote: " $5442 \div 5 = 1088.2$."

The mistake: _____

Correct answer: _____

c) For this rectangle a pupil wrote: "perimeter = 60 cm, area = 34 cm²."

The mistake: _____

Correct answer: _____

Investigate

Omar says: "A wrong long-multiplication answer is always an adding mistake."

Write **three different** places a mistake could hide in 6814×26 , and show how each one changes the answer.
